

A database of trees

When choosing a primary key

Don't use common names, they might be the same

Use botanical taxonomy

A conifer has cones

and need not evergreen be

For examples there's larch of various kinds

and the beautiful dawn redwood tree

Uĉiĉo kaj uĉidoj

reflected in a lake

Green stars trente-six gently shimmer

as breezes ripples make

Uĉoj are grazing peacefully

That means our software is good

Let us enjoy observing the uĉojn

By a lake in front of a wood

Ready to gallop if there is a need

but there's no need at this time

So grazing at peace in a family group

for all of our coding is fine

Ucô, ucîno, ucidoj

grazing peacefully

Ucô, ucîno, ucidoj

grazing peacefully
